

Emergency Stop Buttons

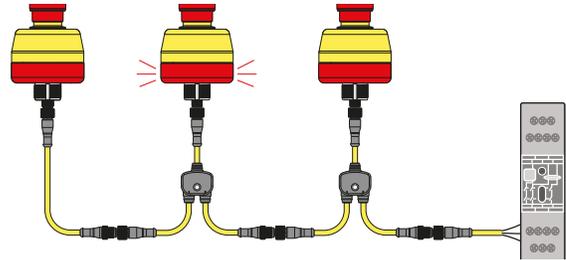

The 30 mm mount illuminated E-stop button has a unique 360 degree round housing, with a red button and yellow background, meeting worldwide safety standards. Models are also available in a non-lit, solid black base for additional safety applications.

Emergency Stop and Stop Controls

Emergency stop devices provide workers a means of stopping a device during an emergency by pushing a button or pulling a rope in order to prevent injury to personnel and material loss.

The red flashing illumination of the E-stop button visibly alerts operators which button was pressed so they can quickly and easily fix the problem to reduce downtime and only reset the button that was activated. When one button is pressed all other buttons turn red.

Rope Pull E-Stop Devices and Switches

- Switch activates if the rope is pulled, becomes loose or breaks
- Rugged plastic housing to withstand harsh environments or heavy-duty housing rated to IP67 for use outdoors
- Models available with additional solid-state auxiliary output for remote tension monitoring
- Models available with E-stop button with manual reset
- Tension indicators

Rope pull emergency stop switches, when used with steel wire rope, provide emergency stop actuation for conveyors and large machinery.

Enabling Devices

A two-hand control safeguarding system will prevent the operator from approaching the machine while a hazard is present. Duo-Touch Run Bar provides an all-in-one solution. Operators can touch the Safety Touch Buttons on either side of the run bar to start or stop a process, or press the E-Stop button to completely halt the assembly line.

Manually operated safety control devices which, when continuously activated and used in conjunction with a separate actuating control, will allow the machine to function in manual operating mode. The handheld grip-styled switch is used for manual control of machine functions, including visual observations, minor adjustments, calibration and more.
